

Irpinia's Eco-friendly **Water-Based** Finishing System

Our "**Water-Based** Finishing System" which utilizes **Water-Based** Stains, Glazes and Top Coats, from the first step to the last step is a true **water-based** finish. This provides Irpinia Kitchens the ability to "**Finish Green**" without compromising finishing quality or durability. We selected the best attributes from our existing technologies and adapted them into our complete **Water-Based** Finishing System. Our "**Water-Based** Finishing System" meets or exceeds present and future regulatory requirements, thus providing tomorrow's answers today.

This latest generation of conventional **Water-Based** Top Coating is the Euroclear. The coating is a revolutionary high solids **water-based** top coating based on a proprietary modified acrylic resin. The **water-based** top coating supplies clarity and hardness comparable to that of traditional "solvent-based" coatings while greatly reducing VOC content and environmental impact. In addition to the outstanding light stability of the acrylic backbone, Euroclear contains UV absorbers to protect the underlying stain and wood substrate.

"A Great Finish is Only the Beginning". Other Advantages and Coating Characteristics are shown below;

Advantages

- Passed KCMA testing
- Very Low VOC
- Urea-Formaldehyde free

Coating Characteristics

- Gives the look and feel of conversion varnish
- Excellent clarity
- Can be used as self seal
- Excellent hardness and mar resistance
- Good production dry times
- Excellent application for both manual and automated spray
